

Innovative. Technology. Solutions.

Is Your Virtualization Strategy Costing You More Than It Should?

Modernize with Confidence: Migrate to OpenShift Virtualization + IBM Fusion

Today's hybrid IT environments demand more than traditional virtualization can deliver. Licensing hikes, tool fragmentation, and legacy limitations make it harder - and more expensive - to scale. That's where OpenShift Virtualization and IBM Fusion comes in.

MAPSYS helps organizations plan and implement this transition - backed by proven results and AI-ready infrastructure.

IBM Fusion supports hyper-converged and software-defined deployments, acting as a single platform for VM consolidation, container orchestration, and cloud-native acceleration - all while preserving compatibility with your legacy systems.

It's also the easiest way to deploy and manage OpenShift and watsonx infrastructure - future-ready, GPU-optimized, and backed by turnkey support.

Fusion simplifies virtualization.

IBM Fusion:

- **Unified Workload Management** for both traditional VMs and modern cloud-native apps
- **Lower TCO** with simplified operations and fewer infrastructure silos
- **Built-in Hybrid Cloud Flexibility** without the need for costly VMware Cloud Foundation
- **Integrated Ecosystem Support** for Fortinet, Veeam, and Red Hat platforms
- **Streamlined Backup and Disaster Recovery** for resilience without complexity

Client Results with IBM Fusion:

- **72%** Reduction in staffing needs by consolidating platforms
- **93%** Improvement in cyber resiliency
- **100%** Reduction of virtualization licensing costs
- **100M+** Scales to support 100M+ files with no planned downtime

About MAPSYS

With over 40 years of experience, MAPSYS helps organizations modernize, secure, and optimize their IT environments. We specialize in aligning proven technologies - like IBM Fusion - with real-world infrastructure needs.
