

# A high-availability solution for the financial sector

Cacpe Loja modernizes its storage infrastructure with IBM FlashSystem 5300

## Summary

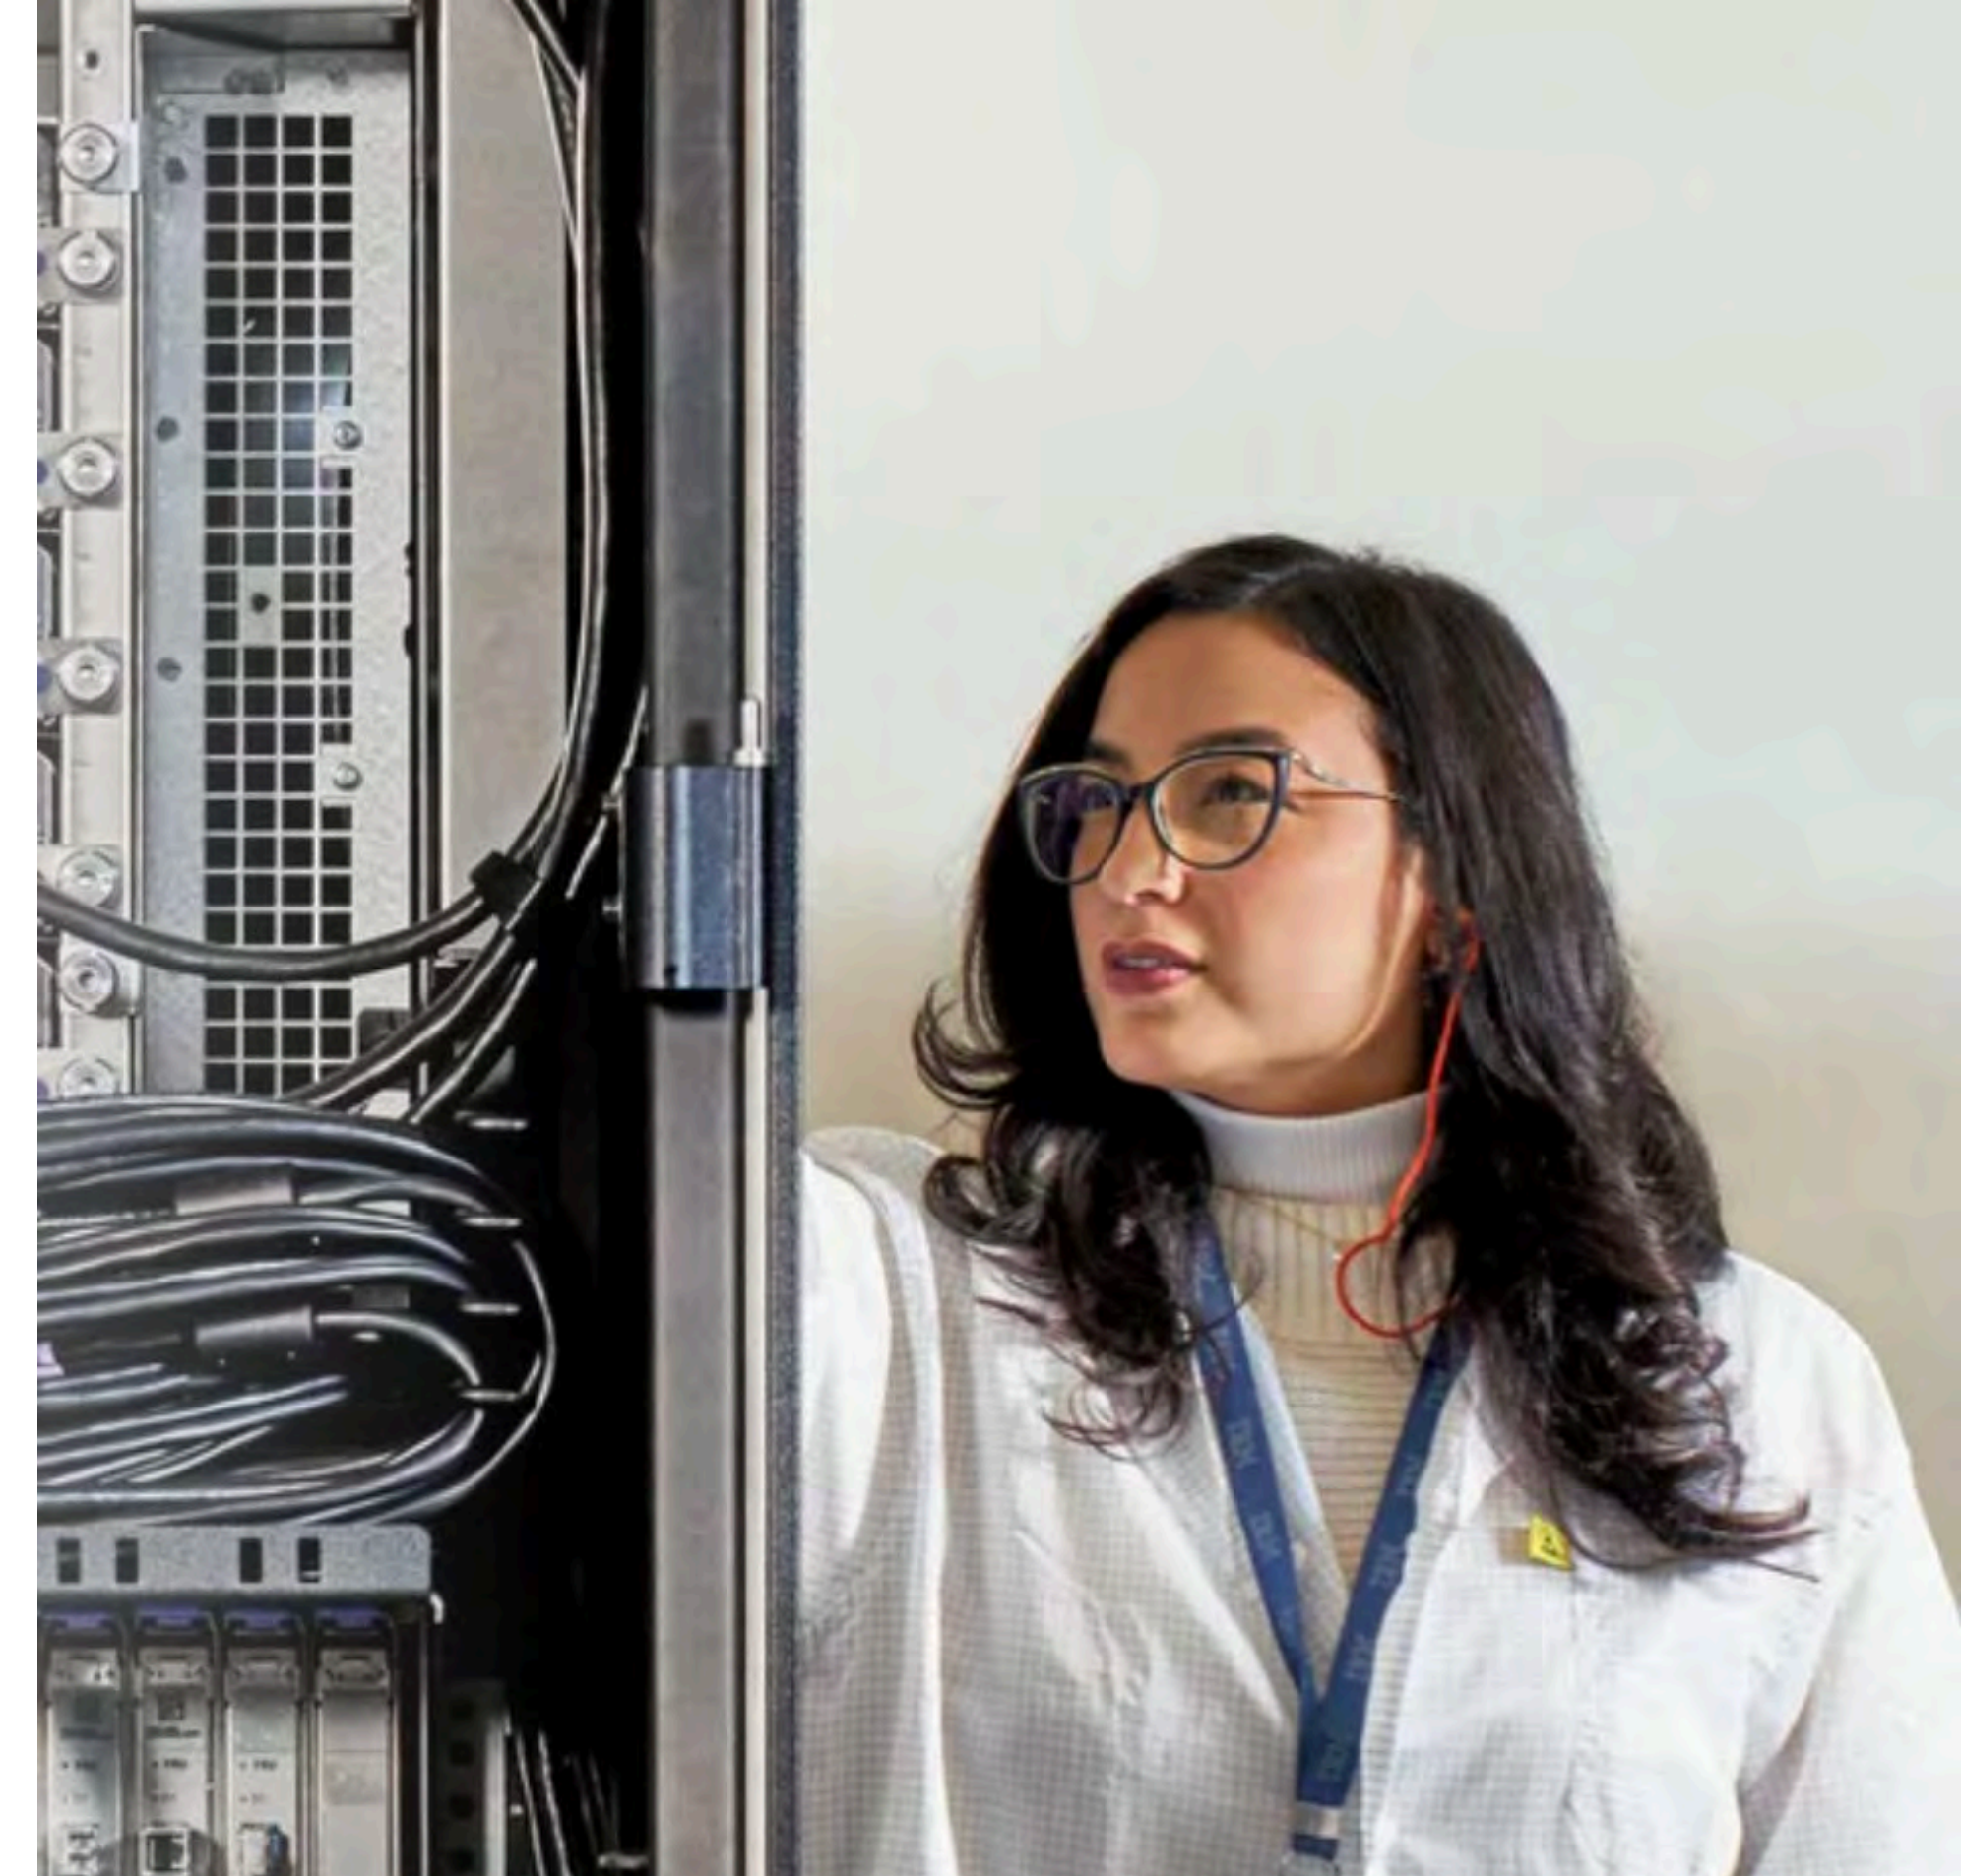

Cacpe Loja, a financial cooperative, faced high availability issues with their existing platform, risking data loss and service disruption. They collaborated with IBM, deploying IBM FlashSystem 5300 with IBM FlashCore Modules for superior performance and cost-effectiveness. IBM Power servers, SAN switches, and IBM Storage Insights Pro were integrated for a redundant, high-availability environment. IBM Expert Labs ensured high-availability functions for storage controllers, meeting Cacpe Loja's stringent requirements.

## Outcomes

- 60% increase in backup efficiency
- 99% high availability
- 60% improvement in process execution response
- 99% capacity increase for transactional database environments

## Solution components

- IBM FlashSystem®
- IBM Power®
- IBM Technology Expert Labs®

*“Ensuring uninterrupted service to our clients is non-negotiable. With IBM FlashSystem and Power infrastructure, we've achieved a level of availability and performance that sets a new standard for our operations.”*
